New Haden Pumps Ltd — SRM Department

Service Repair Maintenance

- New Haden Pumps Limited offers UK coverage on a range of services such as pre-planned scheduled maintenance, call outs, remote telemetry monitoring, system upgrades and complete refurbishments.
- We recommend preventative maintenance to minimise the risk of unexpected failure and therefore the inconvenience of downtime. This will also prolong the problem free life of the pumping equipment.
- Our call-out service aims to repair any faults on site wherever possible with minimum disruption to you and your business.
- Thorough surveys, inspections and reports we can recommend upgrades for improved reliability and enhanced efficiency.
- We offer our services for NHP equipment as well as other pump manufacturers.
- Our workshop facility allows us to offer full repair and testing capabilities as well as stocking a comprehensive range of pumping products, spare parts and associated items.
- To ensure your pumps and related pumping equipment are operating at their optimum performance we would recommend regular servicing. A service agreement can be taken out for either newly installed equipment or for items out of their warranty period.
